

SHABAZ AMEEN M D

AI Engineer • Full Stack Java Developer • AI Integration Lead • 5+ Years Experience

Building practical **AI systems** that reduce operational drag.

I design and deploy LLM-powered automation, intelligent workflows, and production-grade AI solutions that improve response time, customer experience, and operational efficiency.

Model development, optimization, and deployment

Impact

Turning business processes into smarter systems

AI-driven execution with business clarity.

I work at the intersection of artificial intelligence, data strategy, and software implementation. My focus is on building scalable AI workflows, improving decision support systems, and turning technical ideas into measurable operational value.

From intelligent automation to predictive models and LLM-based solutions, I enjoy creating systems that are both technically sound and useful in real business environments.

WHAT I CAN BUILD

From backend foundations to intelligent products.

01 Backend APIs

Develop robust Java and Python-based APIs for reliable, scalable applications.

02 Backend Upgrades

Enhance, modernize, and upgrade existing backend systems without losing business continuity.

03 AI Integrations

Shabaz.

[About](#)[Experience](#)[AI Focus](#)[Skills](#)[Contact](#)[Hire Me](#)

04 Website Chatbots

Create helpful chatbots for existing websites and digital platforms.

05 AI Agents & Automation

Develop complex multi-level, monolithic AI agents and automations for real business needs.

Watch demo

06 Websites & CRMs

Build purposeful websites and CRM platforms that connect people, data, and operations.

EXPERIENCE

Selected AI and automation work.

2025

AYS Incident Resolver

HCLTech | Client: Verizon

- Developed an AI-powered incident automation system integrating LLMs to automatically triage and route incidents, reducing MTTR and manual effort.
- Built workflow orchestration for event intake, categorization, classification, and escalation using Spring Boot, Core Java, Kafka, AWS, and ITSM integrations.
- Worked as Full Stack Java Developer and AI Integration Lead, connecting enterprise tools and automating operational decision-making with intelligent workflows.

2026

Call Volume Analyzer

AI agent platform for billing dispute analysis

- Built an intelligent platform to analyze more than 10,000 daily call summaries for Verizon using LangGraph and Google Gemini.
- Created automated enrichment and diagnostics workflows to extract identifiers, query enterprise APIs, and classify root causes across support workflows.
- Delivered actionable insights that reduced call volume by 10%–15% by

- Delivered actionable insights that reduced call volume by 10%–15% by identifying systemic defects and improving agent guidance.

2025

Churn Degree

n8n workflow | AI-powered retention scoring

- Designed an end-to-end churn score pipeline combining customer data from multiple Google Sheets sources and rule-based risk factors.
- Created explainable churn scoring with 15+ behavioral and financial indicators, producing risk tiers and driver-based insights for customer success teams.
- Enhanced the output using LLM-generated retention summaries and recommended actions while preserving deterministic scoring integrity.

2024

ArshezAI

Autonomous AI HR Recruiting Platform

- Architected and developed an AI recruiting platform using Java 21, Spring Boot 3, React 18, and Anthropic Claude for sourcing, grading, and outreach.
- Implemented multi-agent workflows for candidate discovery, scoring, voice interview interaction, and real-time scheduling with Google Calendar and Meet integration.
- Deployed the production stack with Docker, MySQL migrations, security, CI/CD, and cloud hosting for scalable enterprise use.

2025

Weekly AI Magazine Automation

n8n workflow | AI content aggregation and publishing

- Built an automated weekly AI news magazine pipeline aggregating content from eight sources using REST APIs, RSS feeds, and data normalization.
- Applied deduplication, ranking, and prompt-driven editorial generation with LangChain + Groq to create a polished Markdown magazine.
- Published the finished edition via HTML email and Google Docs, demonstrating scalable orchestration and multi-channel publishing.

AI FOCUS

Areas where I bring practical value.

Machine Learning

Building predictive models, feature engineering pipelines, and evaluation frameworks.

Generative AI

Exploring LLM workflows, prompt design, retrieval strategies, and practical use-case design.

Automation

Designing AI-assisted systems that remove repetitive work and improve business speed.

Data & Insights

Turning scattered information into structured, actionable insight for teams and stakeholders.

SKILLS

Core tools and capabilities.
